Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Previously presented) A medical device, comprising:

a structure comprising a first ceramic fiber comprising a first metalloid, wherein each dimension of the first ceramic fiber is equal to or greater than one micron, and the device is in the form of a stent, a stent-graft, a graft, a medical balloon, or a catheter.

- 2. (Previously presented) The device of claim 1, wherein the first ceramic fiber further comprises a second metalloid.
- 3. (Previously presented) The device of claim 1, wherein the first metalloid comprises an element selected from the group consisting of silicon and boron.
- 4. (Original) The device of claim 2, wherein the first ceramic fiber comprises silicon borocarbonitride.
- 5. (Previously presented) The device of claim 1, wherein the first ceramic fiber further comprises a non-metallic element.
 - 6. (Cancelled)
- 7. (Original) The device of claim 1, wherein the first ceramic fiber is at least about five microns long.

Serial No. : 10/762,816 Filed : January 22, 2004

8. (Original) The device of claim 1, wherein the first ceramic fiber is from about five microns to about 25,000 microns long.

- 9. (Original) The device of claim 1, wherein the first ceramic fiber is at least about five microns wide.
- 10. (Original) The device of claim 1, wherein the first ceramic fiber is from about five microns to about 500 microns wide.
- 11. (Original) The device of claim 1, wherein the first ceramic fiber extends continuously along an entire length of the device.
- 12. (Original) The device of claim 1, wherein the first ceramic fiber extends helically about the device.
- 13. (Original) The device of claim 1, further comprising a second ceramic fiber different from the first ceramic fiber.
 - 14. (Original) The device of claim 1, wherein the structure is a tubular member.
 - 15. (Original) The device of claim 1, in the form of a stent.
- 16. (Original) The device of claim 1, further comprising a polymer layer carried by the structure.
- 17. (Original) The device of claim 1, in the form of a graft, a medical balloon, or a catheter.

Serial No.: 10/762,816 Filed: January 22, 2004

18. (Original) The device of claim 1, further comprising a therapeutic agent.

19. (Previously presented) A medical device, comprising:

a structure comprising

a ceramic fiber; and

a non-ceramic fiber, wherein the ceramic fiber is intertwined with the non-ceramic fiber, and the device is in the form of a stent, a stent-graft, or a graft.

- 20. (Original) The device of claim 19, wherein each dimension of the ceramic fiber is equal to or greater than one micron.
- 21. (Original) The device of claim 19, wherein the non-ceramic fiber comprises stainless steel.
- 22. (Original) The device of claim 19, wherein the non-ceramic fiber comprises a nickel-titanium alloy.
- 23. (Original) The device of claim 19, wherein the ceramic fiber is knitted with the non-ceramic fiber.
- 24. (Original) The device of claim 19, wherein the ceramic fiber is woven with the non-ceramic fiber.
- 25. (Original) The device of claim 19, wherein the ceramic fiber comprises a therapeutic agent.
 - 26. (Cancelled)

Serial No.: 10/762,816 Filed: January 22, 2004

Ŀ

27. (Previously presented) A medical device, comprising:

a structure comprising

a mixture including a polymer and ceramic fibers, each dimension of the fibers being equal to or greater than one micron,

wherein at least one of the ceramic fibers comprises a metalloid.

- 28. (Original) The device of claim 27, wherein the ceramic fibers are at least about five microns long.
- 29. (Original) The device of claim 27, wherein the ceramic fibers are from about five microns to about 25,000 microns long.
 - 30. (Previously presented) A medical device, comprising:
 - a structure comprising
 - a first layer comprising a polymer; and
 - a second layer comprising a ceramic fiber comprising a metalloid.
- 31. (Original) The device of claim 30, wherein the first layer comprises a therapeutic agent.
- 32. (Original) The device of claim 30, wherein the ceramic fiber is knitted, woven, or braided.
 - 33. (Previously presented) A medical device, comprising:
 - a tubular structure; and
- a polymer element on the tubular structure, wherein the polymer element comprises a ceramic fiber comprising a metalloid and each dimension of the ceramic fiber is equal to or greater than one micron.

34. (Original) The device of claim 33, in the form of a stent-graft.

35. (Original) The device of claim 33, wherein the ceramic fiber is from about ten microns to about 1,000 microns long.

- 36. (Original) The device of claim 33, wherein the ceramic fiber is from about ten microns to about 100 microns long.
- 37. (Original) The device of claim 33, wherein the ceramic fiber is from about one micron to about 50 microns wide.
- 38. (Original) The device of claim 33, wherein the ceramic fiber is about ten microns wide.
- 39. (Original) The device of claim 33, wherein the ceramic fiber has an aspect ratio of from about 5:1 to about 500:1.
- 40. (Original) The device of claim 33, wherein the ceramic fiber has an aspect ratio of from about 5:1 to about 200:1.
 - 41-45. (Cancelled)
 - 46. (Previously presented) The device of claim 1, in the form of a stent-graft.
 - 47-50. (Cancelled)
 - 51. (New) The device of claim 2 in which said device is a stent or stent-graft.
